confident that in Violet, I was looking at one of those rare combinations.

Gary informed me that she was available for flushing. We decided together to use the number one TPI bull at the time, Machoman. Unfortunately, he dropped with second crop. Sometimes things work mysteriously in your favor and that is what happened with the Machoman flush. All of the resulting calves from the flush were heifers.

I was now on the outside looking in, with no bull from an interesting cow. Luckily, Gary had continued to flush Victoria and told me that there were Champion calves coming. I jumped at the chance to grab one of those calves for Accelerated Genetics. When the calves were born, Champ was picked from the resulting four bull calves. He passed all of his health tests and was moved to the Accelerated Genetics Production Facility in Westby, Wisconsin.

Champ was sampled through the PACE program and was released into active service with the January 2009 summary. He was ranked 46th on the top 100 TPI list in January. Significant increases for production, type and health traits propelled Champ to 11th on the TPI list in April 2009. At 92% reliability for production and 91% for type after the

April summary, Champ is well proven with already 143 daughters in his proof and can be used with confidence.

The Champ daughters are tall and dairy with some slope to the rump. They have correct leg set and track very straight when viewed from behind. Champ rates very high for udder composite, especially excelling in rear udders, udder depth and teat placement.

Champ is also a standout for production at nearly +2000 milk after the April summary. He has great ratings for longevity and Somatic Cell Score. But perhaps the most impressive area for Champ may be his calving traits. He rates a 7% for Service Sire Calving Ease, which makes him a logical choice to use on heifers. His Daughter Calving Ease of 5% indicates that his daughters should calve with few problems. Low ratings for stillbirth also would indicate Champ calves will be born alive more often than breed average.

When looking for elite genetics that combine a great cow family and the ability to sire high production, type, longevity and calving ease all in one package, few sires can provide all these things. 014HO04766 Champ does combine all of these into one package. Give Champ the chance to be the top bull in your herd.
